

# assess.ai

## A Smarter Assessment System

Assess.ai is the next-generation assessment ecosystem from ASC, specifically designed to make it easier to develop high-quality assessments that utilize best practices & modern psychometric science.

### Authoring/review/banking

Assess.ai makes it easy to author and review items that validly measure what you want to measure yet are engaging to examinees. Assess.ai provides powerful item banking, complex item types, content tagging, item metadata, user tracking, role-based access, and more.

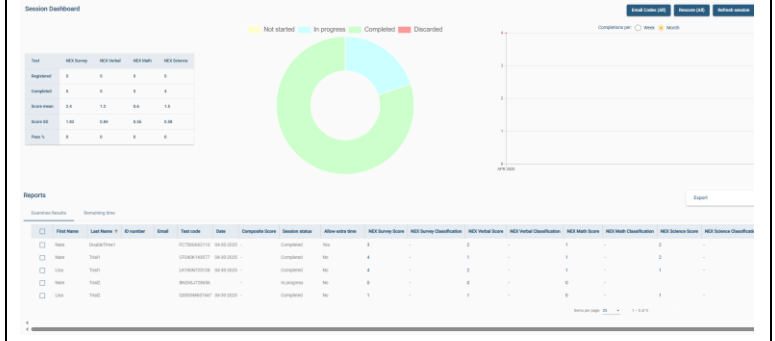

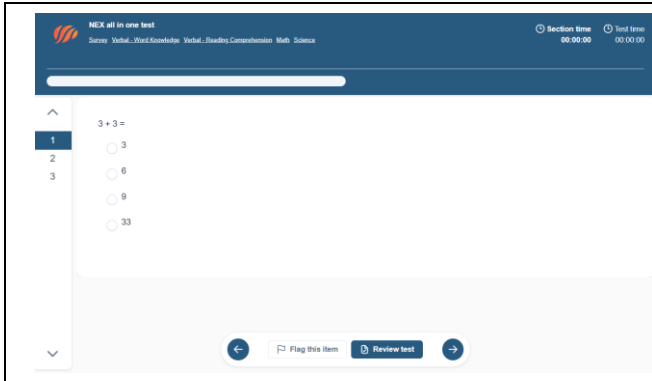

### Quickly publish assessments

Rapidly build psychometrically-sound, customized assessments with Assess.ai's easy to use, automated interface. Publish as linear, LOFT, adaptive, or multistage exams with a range of security and navigation options. Store test design templates to save time on future forms. Customize your scoring with IRT/raw, scaled scoring, percentiles, and subscores.

### Scheduling & Reporting

Manage rosters of examinees, assign to event or continuous sessions, customize your messaging, send reminders, track the live dashboard, compare aggregate reports, and export raw data. Give immediate feedback on build-your-own score reports.

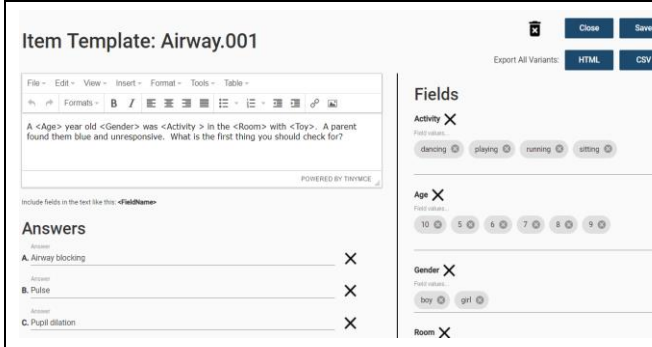

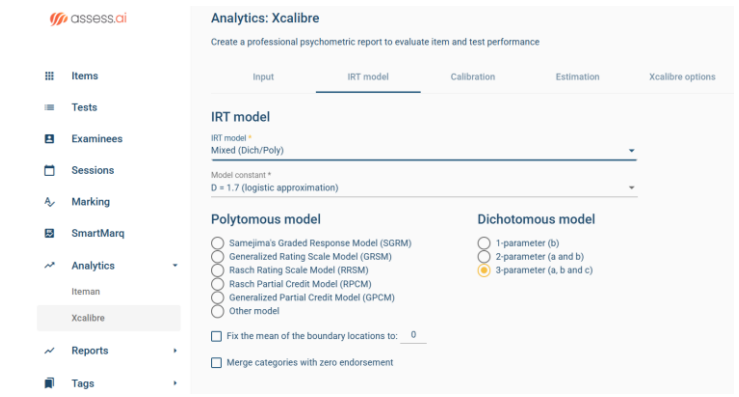

## Deliver securely, at scale

Deliver large-scale or small-scale, with a range of options and widgets for examinee UI. Manage security with lockdown browser, test centers, remote proctoring, time/date windows, and many other configurations. Paper based delivery is also supported, or export to third party test centers.

## Automate your psychometrics

Assess.ai puts the power of a psychometrician in your hands: produce the same reports at a click of a button rather than contracting to expensive consultants. Supports both classical test theory (CTT) and item response theory (IRT). Import the statistics back into the item banking module for historical tracking to ensure validity.

## Driven by Responsible AI

Automated item generation with templates or LLM. Secure essay scoring with our own algorithms. Automatically flag enemy items with natural language processing. Personalized assessment with adaptive and multistage testing.

## Candidate Portal

Streamline your operations by publishing directly to our candidate portal, where examinees can create profiles, register, pay, upload docs, and access score reports or certificates.
